About Us :

With over 35 years of experience in retail & manufacturing , Brendan Tonkin is at the helm of the company. Over the course of his career, he spent 27 years at Nielsen where he worked extensively with clients across Europe on Shelf Planning, Store Planning, Assortment and Category Management.

Our objective is to offer inventive solutions that enable manufacturers and retailers to thrive in the current competitive market. We firmly believe that efficient space planning plays a crucial role in establishing a prosperous retail setting that enhances the overall shopping experience.

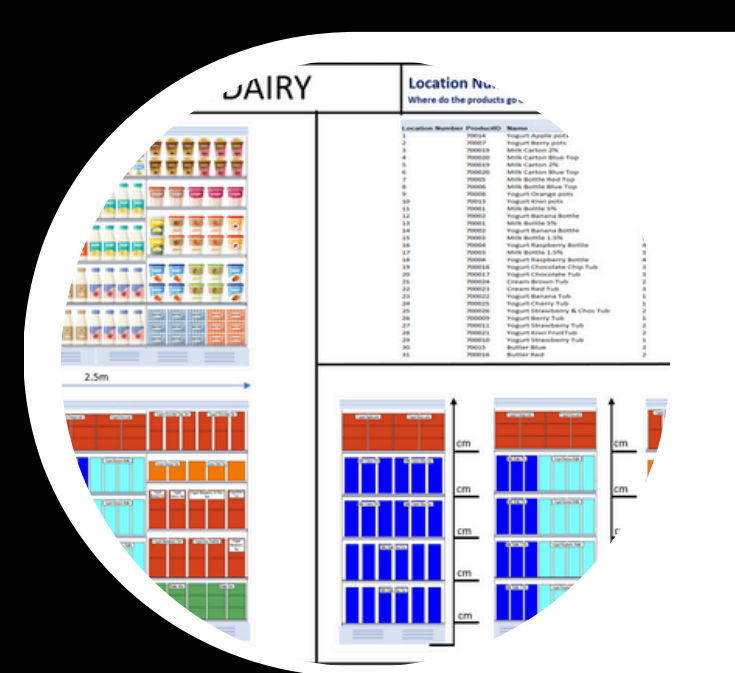

Why Choose Us ?

- Our solutions are designed to be user-friendly and cost-effective, offering only the essential features you require
- As a result, the adoption, training and retraining of new users is faster and more efficient
- We support a wide range of different retail trade channels
- Time Saving
- Measurable Results
- If you don't have the time or resources, we can do the work for you

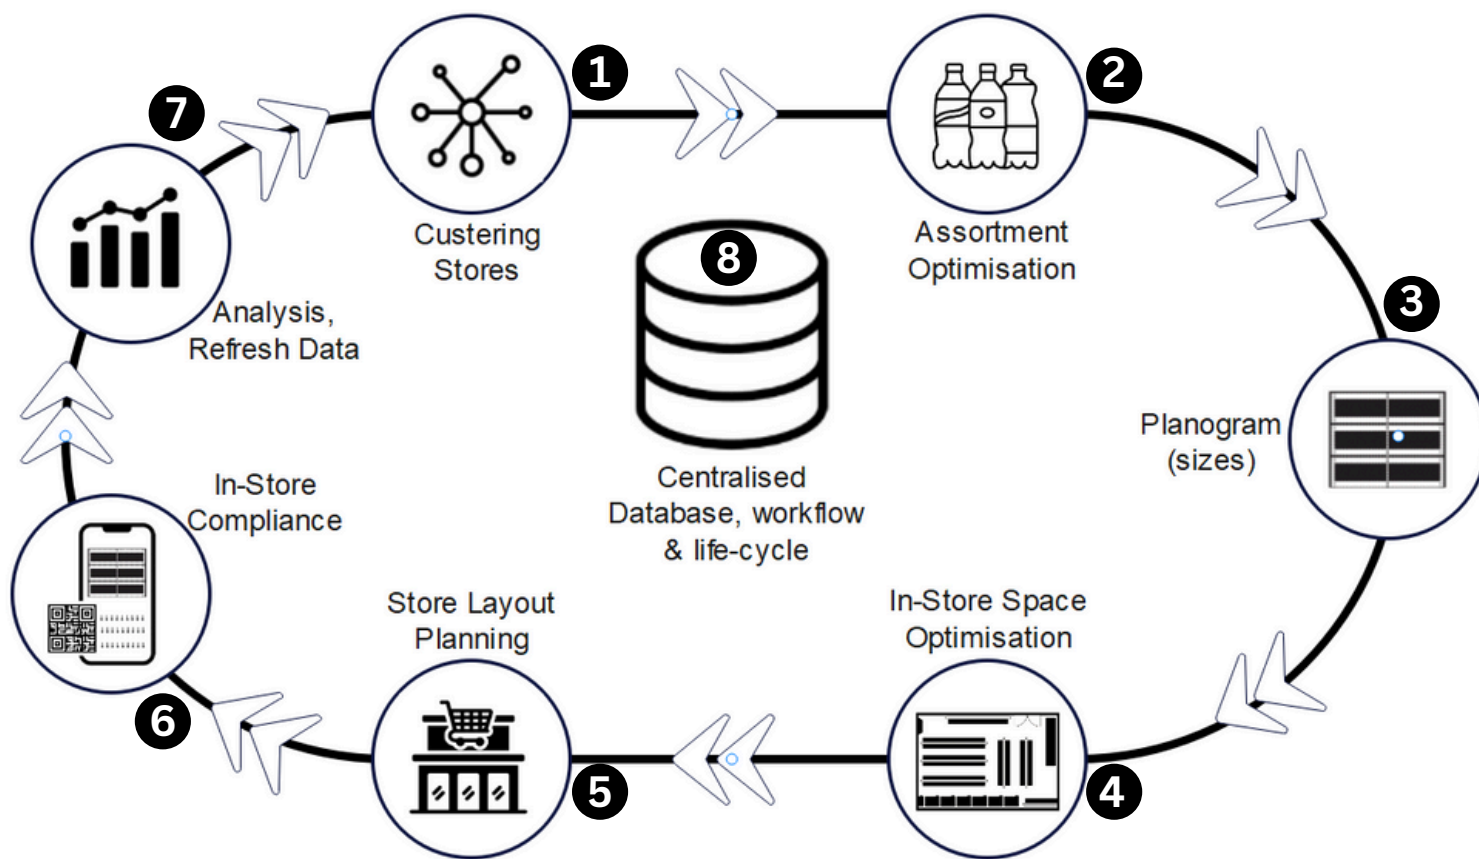

Our dedicated team of professionals is committed to delivering high-quality solutions to our clients. By collaborating closely with manufacturers and retailers, we gain a deep understanding of their distinct needs and preferences, allowing us to customise our services accordingly.

Whether you require shelf space optimisation or a complete store layout redesign, we have the expertise to deliver on your requirements effectively.

Our Services

- Retail Shelf Planning Software
- Retail Floor Planning Software
- RGIS SmartSpace (CAD) Retail Floor Planning Software
- Centralised Database Management
- Assortment Optimisation
- Store Space Optimisation
- Store Clustering
- Planogram Building
- Consulting
- CAD drawing updates and in-store data capture

From start to finish, our collaboration solutions empower retailers and manufacturers to work together effectively, covering every step of the journey.

1. Clustering

Ability to cluster at at a single category or multiple category levels. Plan more efficiently with localised assortments.

2. Assortment Optimisation

Optimise your assortment using a rules based process for a store, group of stores or a fixture space size. Build your assortment for each cluster.

3. Shelf (Planograms)

Build the merchandising blueprint shelf layout and optimise inventory to support availability. Align with stages 1, 2 and 3 to support localisation and in-store space optimisation.

4. Store Space Optimisation

How much space should you give to each category in-store? Run scenarios to identify the optimum bay size for either a total store, department or aisle.

5. Store Planning

Plan current updates, new stores, refits or changes from the optimisation. View store performance KPIs and cost of change metrics.

6. Store Compliance

Using a QR code, call up category planograms in-store on a phone or tablet for efficient compliance checks.

7. Data Analysis/Refresh

Easily refresh periodic data in any of the solutions to analyse results. Re-run, adjust and update to consistently improve.

8. Centralised Database

Store planogram and store plans in one central repository. Utilise centralised workflow, life-cycle and reporting for maximum efficiency.

Greatly enhance the overall customer shopping experience.
